

Contacts Application Task :-

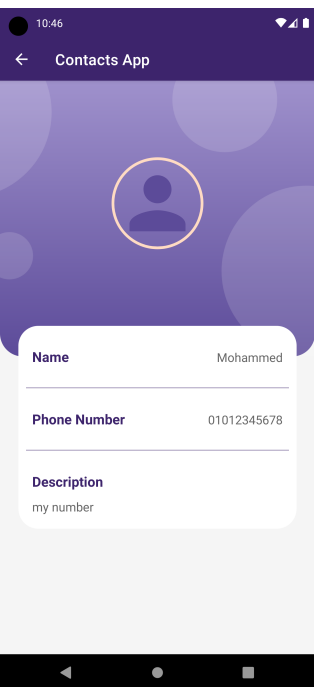

Application consists of 2 screens :-

A- Main Contacts Activity Screen it will be divided to 2 main parts

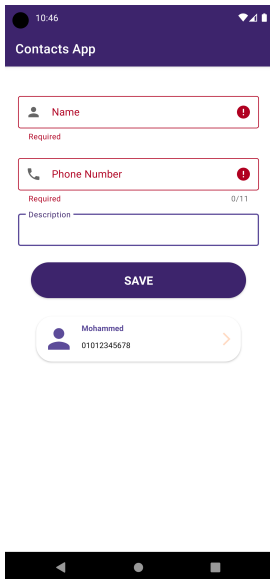

Part.1 :- “Add Contact” it contains 3 main EditTexts “Name , phone Number , Description” and save button

Part.2 :- “That contains contacts RecyclerView but initially will be empty” It should show for each contact item an avatar ”Logo” , Name , Phone Number

B- “Contact Details Activity” It will show avatar, Name , Phone Number , Description with “Back” icon.

Application Flow :-

A- When User first launches the application Recycler View Should be empty , so user has no option except to add a new Contact. and validate Data with simple constraints such as (name should be 3 chars or more)

(phone should be 11 numbers)

(Description can be none)

B- When Added Contact successfully , a contact should appear in MainContacts RecyclerView and when adding another contact should appear in recyclerview ,,and so on...

C- When Clicking on Contact from recycler view should open its details screen.

Kindly note :-

- 1- There is no constraints on Theming
- 2- You will use Interface callbacks (Delegates) - for sure - when clicking on contact
